Hi Ron,

I too am the owner of one of those newer J&M's, JFD-CP model. I actually have the manual for it also. I don't have time to copy or scan the whole thing, need any particular commands out of it?

I know someone was looking for the pinout of the Parallel Connector;

```
1 Write Strobe
3 D0
5 D1
7 D2
9 D3
11 D4
13 D5
15 D6
17 D7
19 Read Strobe
21 Busy
23 N/C
25 Status
26 Reset
```

All even pins are ground

Most Centronics compatible printers will operate with this port, using a Radio Shack Model 100 printer cable.

Access the 16K JDOS menu by pressing <break> at th OK prompt. Options 1 and 2 effect routing of the printer output to either the CoCo serial port or the disk controller parallel port. Jumper J1 can be used to select this automatically, J1 installed = serial, J1 removed = parallel.

Option 9 is the built in Memory minder disk drive analysis program, you can run some tests, but the more advanced ones require a Dysan diagnostic diskette.
